PERSON CALLED	OFFICE	PHONE NUMBER AND EXTENSION
Mike Colapinto	Clark Properties	314-381-2490

## SUMMARY OF CONVERSATION

Pepsi is constructing buildings in the former AREA NO. 3 of the St. Louis Ordnance Plant. Mike is overseeing the construction which is being done by Clayco for Clark Properties. Clark Properties bought the land in question from St. Louis Development Corp. Clark began their construction last March. The buildings were demolished in 1985 by Spirtas Wrecking Co. During the demolition an extensive amount of asbestos had to be disposed of. I informed him that the program is part of the Defense Environmental Program on Formerly Used Defense Sites and the area in question was part of the former St. Louis Ordnance Plant. On the land there was a chemical bullet burn pit, explosive scrap storage and burn pit and some powder magazines. I told him that we are only interested in the chemical warfare and ordnance and that there was another part of the program going on which involved the HTRW aspect. He is interested in the HTRW aspect and is wondering how he can become involved with this because of the asbestos which was found. I told him that I would get back with him on that. Also during their excavation there was a small PCB cleanup in the SW corner of their property. This occurred due to coal from railroad cars. They tested the soil at 100' on center and everything came up negative except for the PCB and asbestos. I asked if they had come across any ordnance. They have uncovered many empty shell casings but nothing live.

Mike is interested in looking at the map we have. He will be able to locate where everything was found for our records. On our way out to Tyson Valley next week we will stop by and meet with Mike. I am to call him on Tuesday and confirm a time. He is located in a white Pepsi trailer on the east side of the property.
